DestinAltion

WELCOME TO 2044 WHERE THE TOURISM INDUSTRY HAS FUNDAMENTALLY CHANGED

As an example of our transformed industry, here you can experience our new approach to booking holidays. In this new booking process, the power dynamic has been flipped: instead of tourists choosing destinations, it's now the destination that chooses the tourist.

To facilitate this, we are getting help from Earth AI's. Connected to natural ecosystems, the built environment and the local population, they have become stewards of their destinations. Tourists can apply for a destination on the booking portal. They will then be taken through a personality scan and assessment interview, after which the destination will evaluate the tourist and decide whether to invite them to their home.

ROOTS

Twenty years ago we realised that to build a truly regenerative industry we needed to shift:

colonial nature of tourism	→	returning power and agency
consumption-based	→	contribution-based
human centred	→	more-than-human centred
sustainable (only reducing impact)	→	regenerative (actively restoring and healing our ecosystems)

The booking system shows how we have moved away from the colonial, capitalist and destructive nature tourism once had. We remember the consumerist times when people went somewhere to take and take and take, with shame and sadness.

This new approach ensures that our industry has a fair and harmonious relationship with the planet and its inhabitants. It shows respect and understanding for our interconnectedness with the more-than-human world. Now, only people who want to protect and care for the planet can become tourists.

As you experience our booking system, we invite you to reflect on the following question:

How can we make the hospitality industry truly sustainable if we continue down the path of technological band-aids and the idea of "green" capitalism, which is still essentially driven by consumption and extractivism?

TECHNOLOGY

The Earth AI is built into the Earth, making it part of the Destination's ecosystem. Its wires and sensors are physically connected to the Web of Life with the amazing technology of 2044. Its interview and assessment processes are rooted in Visual Studio code and ChatGPT. It conducts the interview via an online video call using p5.js and Telegram.

The personality scanner scans the user's internal vibrations using a vibration motor connected to Earth AI via ItsyBitsy. This ensures that the assessment is not based on a person's appearance or conversational skills, but on their intentions and attitude towards their surroundings.
